

Functional & Performance Testing

Model Performance Test

Date	11 September 2026
Team ID	Individual Project
Student Name	Morla Jahnvi
Project Name	An Employee Requests Installation of Licensed Software through the Service Catalog

Software Installation Request Testing:

The project team shall validate the ServiceNow licensed software request process from Service Catalog submission through approval, fulfillment, task completion, notifications, automation, and deployment configuration.

S.No.	Parameter	Values / Test Description	Expected Result	Actual Result	Pass/ Fail
1	Service Catalog Item	Verify that the Licensed Software Request catalog item is available and opens correctly.	Catalog item opens successfully and displays the configured request fields.	Catalog item opens successfully and displays the configured request fields.	Pass
2	Request Submission	Submit a request with Software Name, Version, License Justification and Urgency.	Valid values are accepted and the request is submitted successfully.	Valid values are accepted and the request is submitted successfully.	Pass
3	Request (REQ)	Open the generated request after submission and verify its reference number and linked item.	A unique REQ is generated and linked to the submitted catalog request.	A unique REQ is generated and linked to the submitted catalog request.	Pass
4	Requested Item (RITM)	Open the RITM associated with the REQ and verify the submitted catalog variables.	RITM is created and contains the software request details entered by the employee.	RITM is created and contains the software request details entered by the employee.	Pass
5	Approval	Verify that the request is routed to the configured approver and that the approval decision controls the next step.	Approval record is created and fulfillment proceeds only after approval.	Approval record is created and fulfillment proceeds only after approval.	Pass
6	Fulfillment Task (SCTASK)	After approval, open the generated Catalog Task and verify its assignment to IT / Software Support.	SCTASK is created and assigned to the configured support group for fulfillment.	SCTASK is created and assigned to the configured support group for fulfillment.	Pass
7	Task Completion	Update the fulfillment task after software installation and verify its configured completion state.	The Catalog Task changes to the configured completed state and the request lifecycle can proceed to completion.	The Catalog Task changes to the configured completed state and the request lifecycle can proceed to completion.	Pass
8	Notification / Automation	Verify that configured workflow notifications are triggered at submission, approval/status change and completion.	The configured notification and workflow actions execute when their conditions are satisfied.	The configured notification and workflow actions execute when their conditions are satisfied.	Pass
9	Update Set / Deployment	Open the project Update Set and verify that the configured ServiceNow changes are captured for migration.	Project configurations are captured correctly and are ready for controlled deployment.	Project configurations are captured correctly and are ready for controlled deployment.	Pass

Note: Actual Result and Pass/Fail should be updated after the ServiceNow workflow is executed and validated.
