

Acceptance Testing

UAT Execution & Report Submission

Date	13 September 2026
Team ID	Individual Project
Student Name	Morla Jahnavi
Project Name	An Employee Requests Installation of Licensed Software through the Service Catalog
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this document is to summarize the User Acceptance Testing (UAT) coverage, execution status, and open issues for the ServiceNow Licensed Software Request Automation project.

2. Defect Analysis

This section records the defect status observed during UAT. No defects are recorded for the completed validation scenarios.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	0	0	0	0	0
Duplicate	0	0	0	0	0
External	0	0	0	0	0
Fixed	0	0	0	0	0
Not Reproduced	0	0	0	0	0
Skipped	0	0	0	0	0
Won't Fix	0	0	0	0	0
Totals	0	0	0	0	0

3. Test Case Analysis

The UAT coverage below represents the major functions of the implemented ServiceNow software request workflow. All listed scenarios are recorded as completed.

Section	Total Cases	Not Tested	Fail	Pass
Service Catalog & Request Submission	2	0	0	2
REQ & RITM Processing	2	0	0	2
Approval & Fulfillment	2	0	0	2
Business Rule / Automation	1	0	0	1
Update Set & Deployment Readiness	1	0	0	1
End-to-End Validation	1	0	0	1

4. UAT Test Coverage

The validation follows the implemented project flow: an employee submits the Licensed Software Request, ServiceNow creates the REQ and RITM, the request is routed for approval, an SCTASK is generated for the Software Support / IT team, the task is completed, and the configured automation and Update Set are checked.

Test Case	Area	Expected UAT Outcome	Status
TC-001	Software Installation Request catalog item	Verify the catalog item is available and the configured request form opens correctly.	Done
TC-002	Request information	Verify Software Name, Version Required, License Justification, and Urgency are captured in the request.	Done
TC-003	REQ creation	Verify a Service Catalog Request (REQ) is generated after the employee submits the request.	Done
TC-004	RITM creation	Verify the Requested Item (RITM) is created and retains the submitted catalog variables.	Done
TC-005	Approval	Verify the request reaches the configured approver and the approval decision is recorded.	Done
TC-006	SCTASK fulfillment	Verify an SCTASK is created after approval and routed to the configured Software Support / IT group.	Done
TC-007	Task completion	Verify the fulfillment task can be completed and its state is updated correctly.	Done
TC-008	Business Rule / Automation	Verify the configured backend automation performs the intended actions for the software request workflow.	Done
TC-009	Update Set	Verify project configurations are captured in the Update Set and are ready for migration validation.	Done
TC-010	End-to-End	Verify the complete flow from employee submission through approval, fulfillment, and final status.	Done

5. Open Issues / Exceptions

No open issues are recorded in this report at the time of preparation. If a defect is identified during later validation, it should be documented with reproduction steps, severity, status, and tester feedback.

6. Final Report Output

This UAT report provides a consolidated view of testing for the ServiceNow Licensed Software Request Automation project. The documented scenarios cover request submission, REQ/RITM processing, approval, fulfillment, automation, Update Set readiness, and end-to-end execution.

7. Version Control

Version	Date	Description	Prepared By
1.0	13 September 2026	UAT Execution & Report Submission for Licensed Software Request Automation	Morla Jahnavi
