

Project Design Phase-II

Data Flow Diagram & User Stories

Date	5 September 2026
Project Type	Individual Project
Student Name	Morla Jahnvi
Project Name	An Employee Requests Installation of Licensed Software through the Service Catalog
Maximum Marks	4 Marks

1. Data Flow Diagram

The proposed system provides a structured way for employees to request licensed software through the ServiceNow Service Catalog. The request information is captured in ServiceNow, routed through the required approval stage, and then converted into a fulfillment task for the IT Support team.

The flow also keeps the requester informed through notifications and allows the progress of the request to be followed until the software installation activity is completed.

The high-level movement of information is represented below:

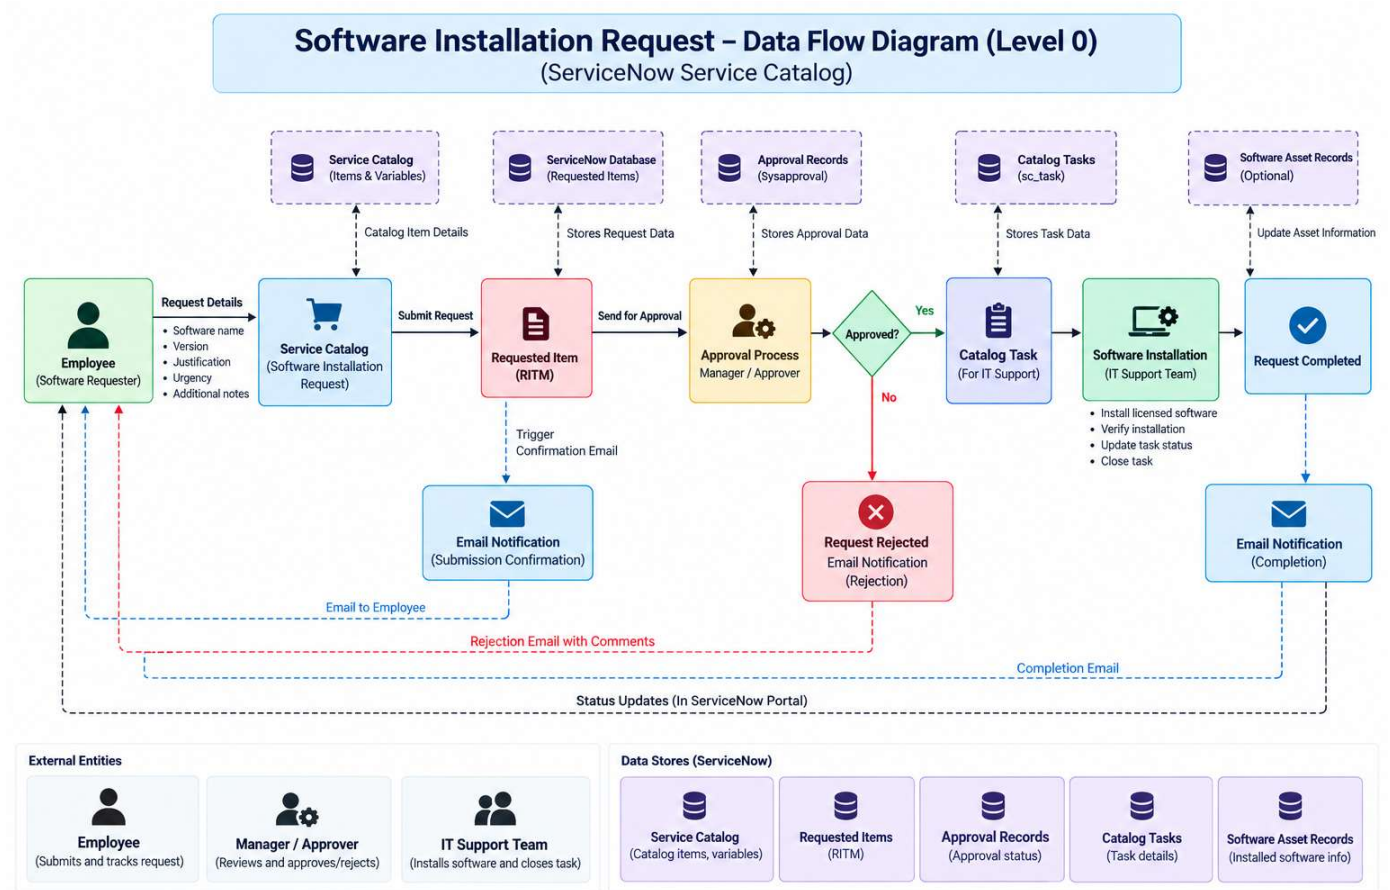

Figure 1: High-Level Licensed Software Request Flow

Flow Description

- The employee opens the ServiceNow Service Catalog and chooses the licensed software installation request.
- The employee provides the required information, such as software name, version, license justification, and urgency.
- After submission, ServiceNow creates the related request and Requested Item (RITM) records.
- A confirmation notification is sent to acknowledge that the request has been received.
- The request is routed to the configured approver for review and decision.
- When approval is granted, ServiceNow creates a Catalog Task and routes it to the appropriate IT/Software Support team.
- The support team performs the installation and updates the fulfillment task.
- The requester can follow the request status through completion and receive relevant status updates.

Project Design Phase-II

Data Flow Diagram & User Stories

2. User Stories

The user stories below describe the main functions required for the licensed software request process. They are organized by the person or team involved and include the expected result, priority, and planned release.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Employee	Software Access Request	USN-1	As an employee, I can open the ServiceNow Service Catalog and submit a request for licensed software.	A software installation request is created successfully.	High	Sprint-1
Employee	Request Information	USN-2	As an employee, I can enter the software name, version, business justification, and urgency in the request form.	All mandatory catalog variables are stored with the requested item.	High	Sprint-1
Employee	Submission Confirmation	USN-3	As an employee, I receive a confirmation notification after my software request is submitted.	A confirmation notification is generated for the submitted request.	Medium	Sprint-1
Manager / Approver	Request Approval	USN-4	As an approver, I can examine a software request and approve or reject it before fulfillment.	The request follows the configured approval path and records the decision.	High	Sprint-1
IT Support Team	Installation Fulfillment	USN-5	As an IT support member, I can receive and work on the Catalog Task created for an approved request.	A Catalog Task is generated and assigned to the appropriate support group.	High	Sprint-1
Employee	Request Status	USN-6	As an employee, I can check the progress of my software installation request.	The request and associated fulfillment status remain available until completion.	Medium	Sprint-1

Project Flow Summary

The overall process begins with the employee submitting a software requirement through the Service Catalog. ServiceNow records the request, triggers the required notification and approval steps, and creates a fulfillment task after approval. The IT Support team completes the installation, while the requester can follow the status until the request is closed.
