Student Name	Morla Jahnavi
Project Name	An Employee Requests Installation of Licensed Software through the Service Catalog
Maximum Marks	2 Marks

Problem – Solution Fit

Problem–Solution Fit identifies a real customer problem and checks whether the proposed solution directly addresses it. For this project, employees need a clear and reliable way to request licensed software, obtain the required approval, and follow the request until installation is completed. The proposed ServiceNow process brings these activities together through the Service Catalog, automated workflow, approval, Catalog Task creation, notifications, and request tracking.

Purpose

- Understand the difficulties employees face when requesting licensed software.
- Identify the limitations of manual and email-based software request processes.
- Design a solution that fits employee behaviour and organizational requirements.
- Improve request visibility, approval efficiency, compliance, and fulfillment.
- Provide a standardized and transparent software installation request process.
