

Project Design Phase

Proposed Solution Template

Date	8 September 2026
Team ID	Individual Project
Student Name	Morla Jahnavi
Project Name	An Employee Requests Installation of Licensed Software through the Service Catalog
Maximum Marks	2 Marks

Proposed Solution:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Employees need licensed software for their work, but software requests can involve manual communication, approval follow-ups, incomplete request details, and limited visibility of the request status. The project addresses the need for a clear and centralized process for submitting, approving, fulfilling, and tracking software installation requests.
2.	Idea / Solution description	The proposed solution uses ServiceNow Service Catalog to provide a dedicated licensed-software request. The employee enters the required software details and submits the request. ServiceNow creates the request records, routes the request for approval, sends notifications, and creates a Catalog Task for the IT / Software Support Team after approval. The employee can track the request until the software is installed and the task is completed.
3.	Novelty / Uniqueness	The solution brings software request submission, approval, fulfillment, notifications, and tracking into one structured workflow. Instead of relying on separate emails or manual follow-ups, the ServiceNow workflow connects the requester, approver, and IT Support Team through REQ, RITM, approval, and Catalog Task records.
4.	Social Impact / Customer Satisfaction	The solution gives employees a simpler and more transparent way to request required software. It reduces unnecessary follow-ups, improves communication between employees and IT Support, and provides visibility into request progress. For the organization, it also supports controlled and authorized software installation.
5.	Business Model (Revenue Model)	The solution is an internal enterprise workflow rather than a direct revenue-generating product. Its business value comes from reducing manual coordination, improving IT service efficiency, supporting software-license governance, and providing a standardized process that can be used across departments.
6.	Scalability of the Solution	The ServiceNow workflow can be extended to additional software, departments, approval rules, and request types. New catalog items and fulfillment workflows can be added without changing the basic request structure. The same approach can also be adapted for software access, upgrades, renewals, and other IT service requests.
