

Ideation Phase

Define the Problem Statements

Date	3 September 2026
Team ID	Individual Project
Student Name	Morla Jahnavi
Project Name	An Employee Requests Installation of Licensed Software through the Service Catalog
Maximum Marks	2 Marks

Customer Problem Statement:

A customer problem statement describes the difficulty experienced by the people who use or support a service. In this project, the focus is on employees who need licensed software and the IT support team responsible for processing those requests.

Clearly identifying these difficulties helps define a ServiceNow solution that brings request submission, approval, fulfillment, tracking, and compliance into a more organized process.

PS-1: Employee / Requester Problem Statement

Customer Problem Statement - PS-1

I am	an employee who needs licensed software to perform my work effectively
I'm trying to	submit a software installation request and get it installed within a reasonable time
But	the current process requires multiple emails and manual follow-ups, and there is limited visibility
Because	there is no single, standardized, and automated process for handling software requests
Which makes me feel	frustrated, delayed, and uncertain about the status of my request

I am (Customer)	I'm trying to	But	Because	Which makes me feel
an employee who needs licensed software	submit my software requirement and get the required software installed	the current process may involve emails, follow-ups, and unclear progress	requests are not handled through one consistent automated workflow	uncertain about the status and concerned about delays

PS-2: IT Support / Fulfillment Team Problem Statement

I am (Customer)	I'm trying to	But	Because	Which makes me feel
an IT support team member handling software installation requests	review requests, complete approvals, and arrange installation	manual processing can require repeated coordination and communication	request details, approvals, and fulfillment are not connected in one automated flow	overloaded and less efficient when several requests need attention

How the Proposed ServiceNow Solution Addresses These Problems

- A dedicated Service Catalog item gives employees one clear place to submit a licensed software request.
- The form records the information needed for processing, including Software Name, Version, License Justification, and Urgency.
- Flow Designer links the main workflow activities by sending the submission notification, handling approval, and creating the Catalog Task.
- REQ, RITM, and Catalog Task records keep the request information and progress available within ServiceNow.
- The structured workflow helps maintain software licensing information and supports IT governance and compliance requirements.
