

Ideation Phase

Empathize & Discover

Date	4 September 2026
Team ID	Individual Project
Student Name	Morla Jahnavi
Project Name	An Employee Requests Installation of Licensed Software through the Service Catalog
Maximum Marks	4 Marks

Empathy Map Canvas:

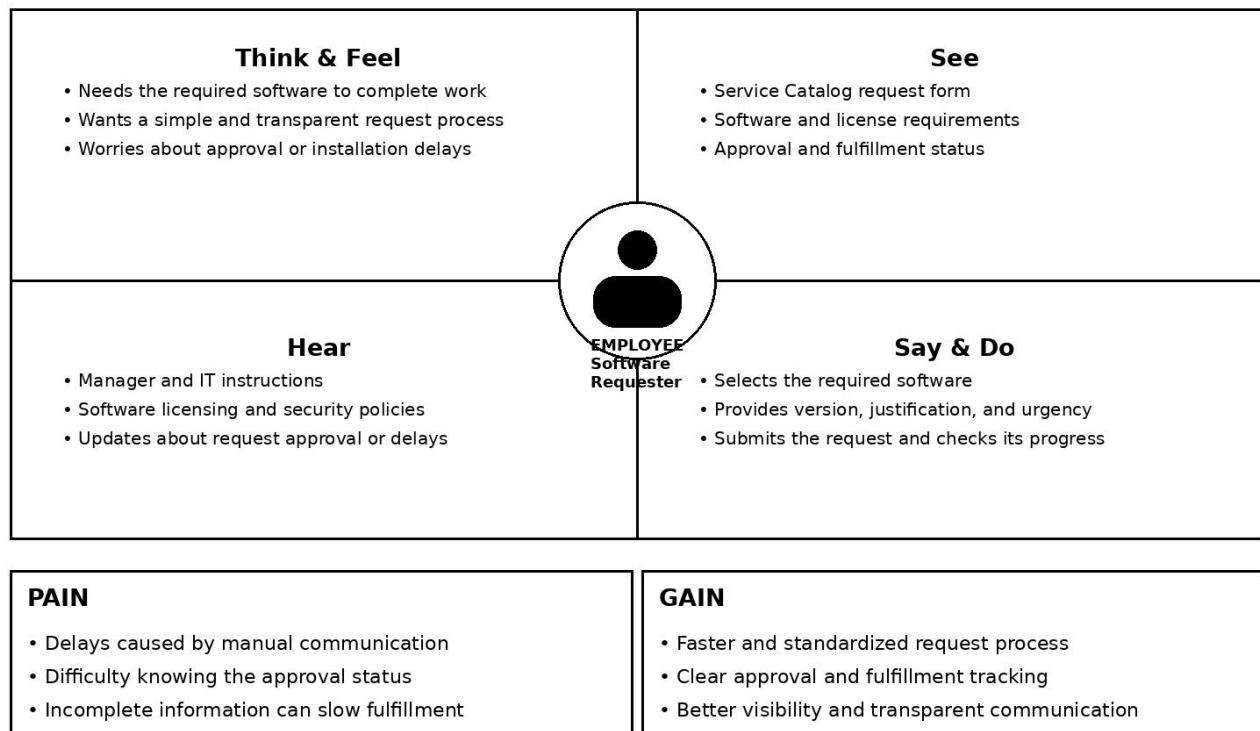

An empathy map helps understand a user's behaviours, attitudes, goals, and challenges. For this project, the primary user is an employee who needs licensed software to perform work efficiently.

Understanding the employee's perspective helps identify difficulties in submitting software requests, following approval progress, and knowing when the installation will be completed.

Empathy Map for the Software Installation Requester

Empathy Map – Employee Requesting Licensed Software Installation

Empathy Map - Employee / Software Requester

User Persona: Employee / Software Requester

Empathy Area	Project-Specific Understanding
Think & Feel	The employee needs the required software for work, expects a straightforward request process, and is concerned about approval or installation delays.
Hear	The employee receives information about software policies, licensing requirements, approval procedures, and updates from the relevant teams.
See	The employee sees the Service Catalog request form and can follow the request through its approval and fulfillment stages.
Say & Do	The employee selects the required software, enters the version, justification, and urgency, submits the request, and follows its progress.
Pain	Manual communication can lead to delays, limited status visibility, repeated follow-ups, and incomplete information.
Gain	A standardized ServiceNow process provides clearer tracking, automated workflow steps, faster coordination, and more transparent communication.

Project Insight

The empathy map shows that the employee needs a simple and reliable way to request licensed software and remain informed about its progress. The ServiceNow solution addresses these needs through a standardized Service Catalog item, required request information, automated notification and approval, Catalog Task creation for the Software Support Team, and centralized tracking through ServiceNow records.
